

Vision Document: <product_name>

Executive Summary

3-5 sentences only. What it is, who it serves, what problem, expected outcome.

<product_name> is a <product_type> that enables <target_users> to <core_capability>. It addresses <business_problem> by approach_or_differentiation>. The expected outcome is <measurable_business_result>.

Business Context

Problem Statement

Be specific and concrete. Avoid "improve efficiency". Quantify where possible.

<problem_description>

The specific problems are:

<problem_bullets>

Business Drivers

Why now? Market conditions, competitive pressure, regulatory changes from domain KB.

<business_drivers_bullets>

Target Users and Stakeholders

≥ 3 user types. Use domain-specific roles from KB, not generic "admin/user".

User Type	Description	Primary Need

e.g. | Centre Principal | Manages daily operations of a single centre | Real-time visibility into enrolments and compliance status |

<user_types_table_rows>

Business Constraints

Budget, regulatory, timeline, organisational. Cite specific regulations from KB.

<business_constraints_bullets>

Success Metrics

Numeric targets with measurement methods. Never "improve" or "increase".

Metric	Current State	Target State	Measurement Method

e.g. | Enrolment processing time | 5 days manual | < 1 day automated | System timestamp: submitted → confirmed |

<success_metrics_table_rows>

Full Scope Vision

Product Vision Statement

Aspirational. Single paragraph. What does the world look like when fully realised?

<vision_statement>

Feature Areas

≥ 4 areas. Each: Description, Key Capabilities (bullets), User Value. Domain-specific capabilities, not technical layers.

<feature_areas>

Integration Points

Real systems from domain KB. Format: [System] - [Purpose of integration]

<integration_points>

User Journeys (Full Vision)

≥ 2 journeys. Numbered steps. End with Outcome. Domain-specific personas.

<user_journeys_full>

Scalability and Growth

Growth dimensions relevant to the domain: markets, volumes, user types, geographies.

<scalability_growth>

Long-Term Roadmap

Phased. MVP first, then expansion phases with focus areas.

Phase	Focus	Timeframe
<roadmap_table_rows>		

MVP Scope

MVP Objective

1-2 sentences. What must the MVP prove or deliver?

<mvp_objective>

MVP Success Criteria

≥ 5 testable checkboxes. Specific and measurable.

<mvp_success_criteria_checklist>

Features In Scope (MVP)

≥ 5 features. Must be subset of Full Scope Vision. Priority + Rationale for each.

Feature	Description	Priority	Rationale for Inclusion

e.g. | Online Enrolment | Parents submit enrolment applications digitally | Must Have | #1 pain point; eliminates paper forms |

<mvp_features_table_rows>

Features Explicitly Out of Scope (MVP)

≥ 3 features. From Full Vision but deferred. Reason + Target Phase. Prevents scope creep.

Feature	Reason for Deferral	Target Phase

e.g. | AI-powered recommendations | Requires 6 months of usage data for training | Phase 3 |

<out_of_scope_table_rows>

MVP User Journeys

Simplified versions of Full Vision journeys. Note "Limitation vs Full Vision".

<mvp_user_journeys>

MVP Constraints and Assumptions

Each with "Risk if wrong" and mitigation.

`<mvp_constraints_assumptions>`

MVP Definition of Done

Testable checklist. When is MVP complete?

`<mvp_definition_of_done_checklist>`

Risks and Dependencies

Key Risks

≥ 4 risks. All 3 columns mandatory. Domain-specific risks, not generic.

Risk	Likelihood	Impact	Mitigation

e.g. | ECDA API changes mid-project | Medium | High | Abstract integration behind adapter layer; monitor ECDA changelog |

`<risks_table_rows>`

External Dependencies

With owner and status. Format: [Dependency] - [Owner] - [Status]

`<external_dependencies_bullets>`

Open Questions

≥ 3. These feed directly into requirements analysis. Actionable, not rhetorical.

`<open_questions_checklist>`
